

REMARKS

The application contains claims directed to what are believed to be the following
patentably distinct groups:

Group I: Claims 112-136 directed to methods and apparatuses for integrating
or extracting content distribution information in adjunct data to
content.

Group II: Claims 137-161 directed to methods and apparatuses for tracing
network packet traffic by modifying adjunct data to packets.

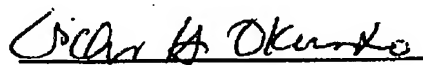

These claim groups generally conform to groups determined in the PCT Search Report
for the corresponding PCT application.

Accordingly, provided the Examiner accepts this suggested restriction requirement,
applicants elect to prosecute Group I, claims 112-136 in the present application and
cancel Group II, claims 137-161 in the present application. This election would be made
in such case without traverse.

Also, in the event that the Examiner accepts the suggested restriction requirement and
claims 137-161 are cancelled, please credit Deposit Account 130762 (Holder:
Macrovision Corporation) for any refund that is due for the cancelled claims.

Respectfully submitted,

Dated: October 15, 2007
